“ The CPS Energy Small Business Program helped us improve our energy costs, and the program implementation was executed smoothly and efficiently. We're proud to serve as an energy-efficient role model in our community.

NATHAN KOSUB
Manager, Kosub Transmission Service

CASE STUDY

Driving home the savings

The road to efficiency

Kosub Transmission Service was skeptical about energy efficiency at first.

After hearing about Small Business Solutions, the transmission center reached out to us to see if the program would be a valid, worthwhile investment. They were quickly reassured, and joined the program to complete lighting upgrades at their repair shop in San Antonio, Texas. It made a huge difference.

A shining example

While most small businesses get either interior or exterior lighting upgraded, Kosub received both. The center had a total of 76 light fixtures upgraded, replacing existing equipment with LEDs and reducing the number of fixtures to cut energy consumption even further. The project was so successful, it's been used as an example to encourage other businesses to make similar upgrades.

Lighting up savings

The payoff was incredible. In total, Kosub received a \$7,419 incentive and is estimated to save \$5,056 and 52,777 kWh a year. That's equivalent to the energy use of 96,268 miles driven by a passenger vehicle.* The project also improved visibility and safety at the shop, which is crucial for successful repairs and happy employees.

In other words, the lighting makeover was just what the auto shop needed to rev up their bottom line.
